Crop and Forage Recordkeeping Software¹

Damona Doye

Extension Economist and Regents Professor

Producers who have computers frequently ask about the availability of software programs to manage crop and forage production records. Before purchasing a software program, it is important to analyze the value of such a system with regards to making better management decisions. Producers should evaluate their existing records to determine the types of information sought from a software program. Are inventory records important? Are summary reports of primary interest? By considering specific record needs, the producer is better equipped to choose an appropriate software package. This publication is a compilation of software programs to be used as a reference for agricultural producers.²

If the producer is not currently keeping any records on crop or field performance, a good starting point may be some basic production records. Row crops and pasture forages have numerous production practices that should be recorded. Good managers will want to maintain records on variety, planting rates, fertilizer rates, pesticides, fuel consumption, grain, hay, or forage matter produced, etc. for each field maintained in order to determine prolific or inefficient areas of the operation. Some records, such as Restricted Use Pesticides (RUPs) application, must be maintained according to the 1990 FACT Act.³

The most difficult steps to building a valuable record-keeping system are (1) making time for recordkeeping, (2) determining which information is economically feasible to collect, and (3) summarizing the data for use in the decision-making process. Meaningful crop and forage records may be handwritten (for example, see agecon.okstate.edu/farmbook) or kept on a computer. The choice of programs, features, and cost of software are the "fine-tuning" portion of recordkeeping. In the following summary of nine commercially-available crop

record keeping software packages, the features are described under three headings:

- Common Features
- Technological Information
- Advanced Features

The program purchase costs range from \$199 to \$995 for basic versions of the software; advanced versions are more expensive. Many software companies offer free program demonstration copies. Programs have various computer requirements such as minimum processor type and speed, minimum RAM, operating system, and hard disk space. Most programs provide comprehensive data entry fields, as well as production summaries.

Before purchasing any software, determine the level and cost of software support that will be provided by the company. In addition, some programs have specific enterprise information that is required before the program will work. Sorting and filtering capabilities and the type of reports generated may vary, but in many cases, producers have the opportunity to customize reports to meet specific needs. Another important feature may include the ability to query or search the data for specific field information. Every operator must determine the amount of time available to devote to practical recordkeeping and weigh this commitment against software costs, data entry features, and the need for information for management purposes.

Information provided about the following programs was taken from the software provider's website and/or software demos. The summary does not cover all available programs or individual program features. Programs may have other capabilities that are not described in the summary. Producers should contact the respective companies for current purchase information, details on features, and specific hardware requirements.

The features summarized in the tables are not all-inclusive. Some of the software packages go into intricate detail in products applied to the fields and have detailed scale tickets for harvest sales. As the user experiments with demo versions of the software packages, the capabilities of each program become clearer. Several of the software companies have additional software products and/or modules that work with the basic software package to enhance user control. The end user decides how much information to input, track, calculate, and summarize.

- 1 Update from an earlier version co-authored by Randy True, former Extension Assistant. Current version updated with the assistance of Justin Ladd, student assistant.
- 2 An internet search was used to identify widely used commercial software products with multiple applications. Companies were contacted to complete a survey noting their program's parameters. Inclusion in this report is not an endorsement of a product nor is exclusion of a program a rebuke of the product.
- 3 For more information about the FACT Act, please refer to OSU Extension Fact Sheet EPP-322, Pesticide Recordkeeping Requirements for Crop Production.

The Oklahoma Cooperative Extension Service Bringing the University to You!

The Cooperative Extension Service is the largest, most successful informal educational organization in the world. It is a nationwide system funded and guided by a partnership of federal, state, and local governments that delivers information to help people help themselves through the land-grant university system.

Extension carries out programs in the broad categories of agriculture, natural resources and environment; family and consumer sciences; 4-H and other youth; and community resource development. Extension staff members live and work among the people they serve to help stimulate and educate Americans to plan ahead and cope with their problems.

Some characteristics of the Cooperative Extension system are:

- The federal, state, and local governments cooperatively share in its financial support and program direction.
- It is administered by the land-grant university as designated by the state legislature through an Extension director.
- Extension programs are nonpolitical, objective, and research-based information.
- It provides practical, problem-oriented education for people of all ages. It is designated to take the knowledge of the university to those persons who do not or cannot participate in the formal classroom instruction of the university.
- It utilizes research from university, government, and other sources to help people make their own decisions.
- More than a million volunteers help multiply the impact of the Extension professional staff.
- It dispenses no funds to the public.
- It is not a regulatory agency, but it does inform people of regulations and of their options in meeting them.
- Local programs are developed and carried out in full recognition of national problems and goals.
- The Extension staff educates people through personal contacts, meetings, demonstrations, and the mass media.
- Extension has the built-in flexibility to adjust its programs and subject matter to meet new needs. Activities shift from year to year as citizen groups and Extension workers close to the problems advise changes.

Oklahoma State University, in compliance with Title VI and VII of the Civil Rights Act of 1964, Executive Order 11246 as amended, Title IX of the Education Amendments of 1972, Americans with Disabilities Act of 1990, and other federal laws and regulations, does not discriminate on the basis of race, color, national origin, gender, age, religion, disability, or status as a veteran in any of its policies, practices, or procedures. This includes but is not limited to admissions, employment, financial aid, and educational services.

Issued in furtherance of Cooperative Extension work, acts of May 8 and June 30, 1914, in cooperation with the U.S. Department of Agriculture, Robert E. Whitson, Director of Cooperative Extension Service, Oklahoma State University, Stillwater, Oklahoma. This publication is printed and issued by Oklahoma State University as authorized by the Vice President, Dean, and Director of the Division of Agricultural Sciences and Natural Resources and has been prepared and distributed at a cost of 42 cents per copy. Revised 0111 GH.
